Accurate and robust dispensing, 24/7, from an economical desktop robot

ECT introduces a new economical and innovative robot for your dispensing applications. The latest system is the model **I&J7900-LF**, a fully RoHS compliant compact 3-axis **Dispensing Robot** with a sizeable work area of 200x200mm and a Z-axis of 50mm. The **I&J7900-LF** is simple to program using unique dispensing software and step by step point-and-click instructions entered via a brightly lit LCD teach pendant. Resolution is 0.02mm per axis and up to 100 programs can be stored in the robot's data memory and/or flash card. An optional windows software package can be used for greater storage, editing, and conversion of CAD files. Interpolation is possible in all axes permitting any dispensing path such as gasket beads and auto-fill areas. The **I&J7900-LF** can apply dots, lines, circles, and eclipses in any point-to-point or continuous path configuration. The **I&J7900-LF bench top robot** is economical - its strategic pricing makes the decision to automate most dispensing applications an affordable option for your company, large or small, in manufacturing or research.

applications for **robotic dispensing**.
